18. Integrations
19. Offline & PWA Support

1. Dashboard (Venue Pulse)

The dashboard is the command centre of Hobart Hub. It provides a real-time operational snapshot of your venue the moment you open the app.

Health Score

A composite score from 0-100 displayed as an animated ring gauge. Factors in: revenue logged, labour % vs target, stock health (items at PAR), compliance completion, overdue tasks, and open maintenance tickets. The background gradient shifts from red (low) to green (high).

Financial Cards

- Today's Revenue — big number with sparkline trend, vs-last-week delta, EFTPOS/cash split
- Labour Cost — percentage with progress bar vs target, live data from Tanda
- Daily P&L Estimate — revenue minus wages minus wastage, covers and avg spend per head

Operational Pulse

- Stock Health — % of items at/above PAR, total inventory value
- Compliance — temperature breach count, shift checklist completion %
- Tasks — overdue rotational task count with priority sorting
- Team — active staff count, qualification expiry alerts

7-Day Revenue Chart

SVG bar chart showing last 7 days of revenue. Today highlighted in green. Dollar amounts and day labels on each bar. Covers sparkline below if guest data exists.

Quick Actions & Focus List

Up to 6 priority focus items sorted by urgency. Eight quick-action buttons in a 2x4 grid for one-tap access to common tasks (log takings, stocktake, compliance check, etc.).

2. Inventory Hub

Consolidates all stock management into a single view with four tabs. Tracks every product from purchase through to depletion.

Tab: Stock Levels

- Live stock display with colour-coded PAR indicators (red = below, green = healthy)
- Smart filtering: Active, Below PAR (with count badge), by category, or Archived
- Search by product name or SKU, debounced at 250ms
- Inline editing: tap stock or PAR values to update via styled modal
- Bulk actions: multi-select then reassign zone, supplier, category, archive, or delete
- Full pricing: buy price per unit, yield ratio, cost per use-unit
- CSV export of full inventory list
- Price trend charts from invoice history with change % indicators
- Performance: renders max 200 items to prevent iPad lag

Tab: Stocktake

- Start new stocktake — snapshots current theoretical stock
- Zone-filtered counting interface with progress bar
- Real-time variance display (theoretical vs actual)
- Variance review sorting items by dollar impact (green <5%, orange 5-15%, red >15%)
- Completed stocktake history with staff name and timestamp

Tab: Stock Audit

Complete chronological log of every stock movement. Every change tracked with: item name, qty change, before/after values, source (invoice, depletion, wastage, manual, stocktake), staff member, and timestamp.

Tab: PAR Editor

Bulk editing of PAR targets. Separate weekday and weekend PARs per item, grouped by category. Current stock vs target with colour coding.

3. Wastage Tracker

Track and analyse product waste across the venue. Every event is logged with accountability and automatically deducts from inventory.

- Select inventory item, enter quantity wasted (buy or use units)
 - Reason codes: Dropped, Expired, Spillage, Over-production, or custom text
 - Staff accountability — logs who wasted the item
 - Automatic stock deduction with yield conversion
 - Cost calculation: quantity × unit cost
 - Weekly SVG bar chart: daily totals colour-coded (green <\$20, orange \$20-50, red >\$50)
 - 30-day report: total cost, incident count, top 10 wasted items, top reasons
-

4. Compliance Centre

Four-tab compliance hub: temperature monitoring, shift checklists, custom audits, HACCP history.

Tab: Temperature Logging

Log fridge/freezer temperatures with automatic breach detection (>5°C = red breach). Configurable unit names. All logs timestamped for HACCP compliance.

Tab: Shift Checklists

Auto-detected shift type by time: Opening (<2pm), Pre-service (2-8pm), Closing (8pm+). Configurable items per shift with completion tracking and percentage indicator.

Tab: Custom Checklists

Create your own audit checklists (deep clean, weekly equipment check, etc.). Editable categories and items with completion history.

Tab: HACCP History

Full temperature log history table. Date range and unit filtering. Exportable for council audits.

5. Order Hub

Three-tab ordering system: manual orders, AI suggestions, and invoice processing.

Tab: Order List

- Smart order generator: analyses stock vs PAR targets, grouped by supplier
- Supplier warnings: under min spend (red), no delivery today (orange), ready (green)
- One-click copy of pre-formatted order email with items, qty, SKUs
- Order history tracking with date, supplier, items, estimated spend

Tab: AI Order Suggester

Analyses depletion velocity, delivery schedules, and historical usage to recommend optimal order quantities beyond simple PAR replacement.

Tab: Invoice Ripper Pro

- Text-layer PDFs: reads embedded text, AI parses line items
- Scanned PDFs: renders pages as images, sends to Gemini Vision AI
- Direct image upload for scanned invoices
- Extracts: supplier, invoice number, date, all line items with SKU/qty/price
- Auto-matches to inventory by name and SKU
- Price history comparison: flags increases and decreases
- Received quantities automatically added to stock
- Learned matching: remembers corrections for future invoices

6. Recipe & Costing Hub

Five-tab hub: recipe management, margin analysis, ingredient linking, allergens, run sheet generation.

Tab: Recipe Engine

- Menu Recipes: costed items with sell price, auto-calculated GP%
- Batch Recipes: prep batches with yield (e.g. 1 batch = 50 portions)
- Three ingredient types: linked inventory, linked batch (cascading costs), raw text
- Station tags: Kitchen, Bar, Prep (colour-coded)
- Status: Active, 86'd, Development
- Media: photo gallery and YouTube video embedding
- POS Alias: exact Lightspeed name for sales depletion matching
- Recipe scaling: multiply all ingredients by any factor
- AI Recipe Importer: paste text, AI extracts and costs against inventory

Tab: Margins & Pricing

Real-time margin health. Recipes split into below target (red) and healthy (green). KPIs: total recipes, average GP%, counts. Updates when invoice prices change.

Tab: Ingredient Linker

AI scans all recipes for unlinked raw ingredients, suggests inventory matches with confidence scores. Manual override available. Bulk-apply suggestions.

Tab: Allergen Matrix

Dietary flags: GF, DF, VG, V, NF, SF, EF, Spicy. AI scanner auto-detects allergens from ingredient lists. Manual editing. Full menu export.

Tab: AI Run Sheet

Paste SevenRooms booking data. AI generates printable run sheet with time slots, pax counts, booking names, special requirements, and staff checklist.

7. Analytics Hub

Four-tab financial analytics: takings, prime cost, variance, and forecasting.

Tab: Takings & KPIs

Daily revenue entry with EFTPOS/cash split, covers, and wage data. Manual entry or Lightspeed CSV import (Sales By, Guests, Reconciliation). Food vs beverage revenue tracking.

Tab: Prime Cost

The key metric: $\text{Food Cost\%} + \text{Labour\%} = \text{Prime Cost}$ (target <65%). Week-by-week breakdown colour-coded: green ("d55%), orange (55-65%), red (>65%). Live Tanda data for labour.

Tab: Variance Report

Actual vs Theoretical usage. Compares what should have been used (recipes sold) vs what was depleted. Top 30 items by dollar impact. Colour-coded severity. Identifies over-portioning, unreported waste, or count errors.

Tab: Revenue Forecast

Predictive revenue modelling based on historical sales data and seasonal patterns.

8. Staff Hub

Four-tab team management: directory, onboarding, qualifications, contacts.

Tab: Directory

Staff register: name, role, phone, email, status (Active/Inactive), emergency contacts. Search and filter. Quick-view qualifications per person.

Tab: Onboarding

Template-based onboarding with configurable phases. Task completion tracking per new hire with progress indicators.

Tab: Qualifications

Matrix: all staff × all qual types. Defaults: RSA, Food Handler, Fire Warden, First Aid, Police Check. Fully editable types. Colour badges: green (valid), orange (expiring "d30d), red (expired). Summary cards and notification alerts.

Tab: Phonebook

External contacts (tradies, suppliers, managers) with category filtering and search.

9. Rotational Tasks

Task scheduling: recurring (weekly/fortnightly/monthly/quarterly) or specific due date. Colour-coded urgency: red (overdue), orange (due 1-2 days), green (not due). Completion logging with staff initials. Full task history.

10. Maintenance & Equipment

- Fix-It Tickets: log defects, assign tradies, urgent flag, cost tracking, mark resolved
 - Asset Register: equipment with serial numbers, service intervals, service logging
 - Contractor Board: visitor sign in/out with name, company, reason, time tracking
-

11. Handover (Shift Debrief)

End-of-shift log with configurable sections: Service Summary, 86'd Items, Stock Alerts, Issues/Follow-ups, Opening Notes. Records manager, shift type, times, urgent alerts. AI auto-generation available.

12. Incidents

Permanent incident logging: staff name, type, detailed description, timestamp. Full chronological history. HR records and compliance documentation.

13. Roster (Tanda Live)

- Weekly schedule grid: staff, shift times, hours, department
 - FOH/BOH grouping for front and back of house
 - Currently clocked-in staff display with names
 - Auto-refresh: full every 15 min, clocked-in every 5 min
 - Manual roster upload: PDF or image with week naming
-

14. Digital Safe

Secure document hub replacing scattered Google Drive files.

- Grid or table view toggle (saved preference)
 - Category-based organisation with custom categories
 - Expiry tracking: red (expired), orange ("d30 days)
 - Single and bulk upload to Firebase Storage
 - Full search across names, categories, and notes
-

15. Knowledge Base

SOP library with category tabs and card layout. Each SOP can contain text, PDF attachments, or both. Search across titles and content. Training materials, procedures, venue processes.

16. Settings & Configuration

- Suppliers: name, contact, order cutoff time, minimum spend, delivery days
 - Storage Zones: create and manage BOH/FOH locations
 - Tanda Settings: connection status, sync controls, data summary
 - Backup & Restore: manual JSON export/import of all venue data
 - Dark/Light Mode toggle (default: dark)
-

17. Security & Access Control

PIN-based security with three tiers:

- Standard: styled confirmation for routine actions
- Dangerous: PIN required (bulk delete, stock reset)
- Critical: PIN + type confirmation word (venue data wipe)

Forced PIN setup on first use. Styled numeric keypad. Auto-lock after 10 min inactivity. Financial data, staff records, recipes, and settings hidden when locked.

18. Integrations

- Tanda: live roster, timesheets, clocked-in staff, leave, labour costs
 - Lightspeed POS: CSV import (Sales By, Guests, Reconciliation), AI depletion
 - Google Gemini AI: recipe import, ingredient linking, allergen scan, invoice extraction, run sheets, order suggestions
 - Firebase: real-time cloud sync with retry (3 attempts, 10s backoff)
 - Open-Meteo: live weather on dashboard
-

19. Offline & PWA Support

- "Add to Home Screen" on iPad/iPhone for native app experience
- Service worker caches entire app for offline use
- Works without WiFi using locally cached data
- Syncs to cloud automatically when connection resumes
- Daily automatic backups to Firebase (7-day retention)
- Storage health monitoring with warnings at 80% capacity
